Unit-4 → Understanding Harmony in Nature and Existence

Topics :-

1. Understanding Harmony in Nature
2. Four Orders of Nature
3. Interconnectedness & Mutual fulfillment
4. Coexistence & Submergence
5. Recyclability & Self Regulation in Nature
6. Innateness & Inheritance of all four Orders.
7. Units & Space
8. Existence Chart.
9. Holistic Perception of Harmony at all levels of existence.

by Gulshan Tomar

Why is Understanding Harmony in Nature Important?

→ Harmony in nature means that everything – plants, animals, air, water and humans – exists in balance. If one part of nature is disturbed, it affects everything else.

Understanding this harmony helps us:

→ Live in peace with nature.
→ Use natural resources wisely.
→ Protect the environment for future generations.

How Does Human Existence Depend on Nature?

Human rely on nature for everything we need to survive:

① Food & water ② Air ③ Shelter & Clothes ④ Climate Control

e.g → when people spend time in parks or mountains, they feel relaxed and fresh. This shows how deeply we are connected with nature.

by Gulshan Tomar

Understanding Harmony in Nature

what is Nature ?

Nature = Everythings that exists, including living & non-living things.

→ It consists of four orders : Material, Plant, Animal, & Human Order.

by Gulshan Tomar

→ Each order interacts with the others, creating balance and harmony in nature.

Four Orders of Nature

① Material Order → Non-living things.

→ Includes soil, air, water, metals and minerals.
→ It also includes energies [Sound, light, heat, gravity etc].

→ The main feature is Composition & decomposition.
[Smaller units combine to form larger units] &
[larger units can break into smaller].

→ Cannot be created or destroyed; they only change forms.

② Plant Order → Living plants.

→ from tiny algae to large trees.

→ Plants can reproduce, grow and absorbs nutrients from their surroundings.

by Gulshan Tomar

→ They provide nutrition to animals and humans.

→ Unregulated Consumption of plant products can harm health.

by Gulshan Tomar

③ Animal Order

→ This order includes all living animals, from insects to mammals.

→ Animals share many features with plants, such as the ability to grow and reproduce.

→ They have greater mobility from plants [fly, run, swim.

→ Animals are self-aware – they know they exist and have a sense of "I".

④ Human Order

→ Humans are the most evolved among the four orders.

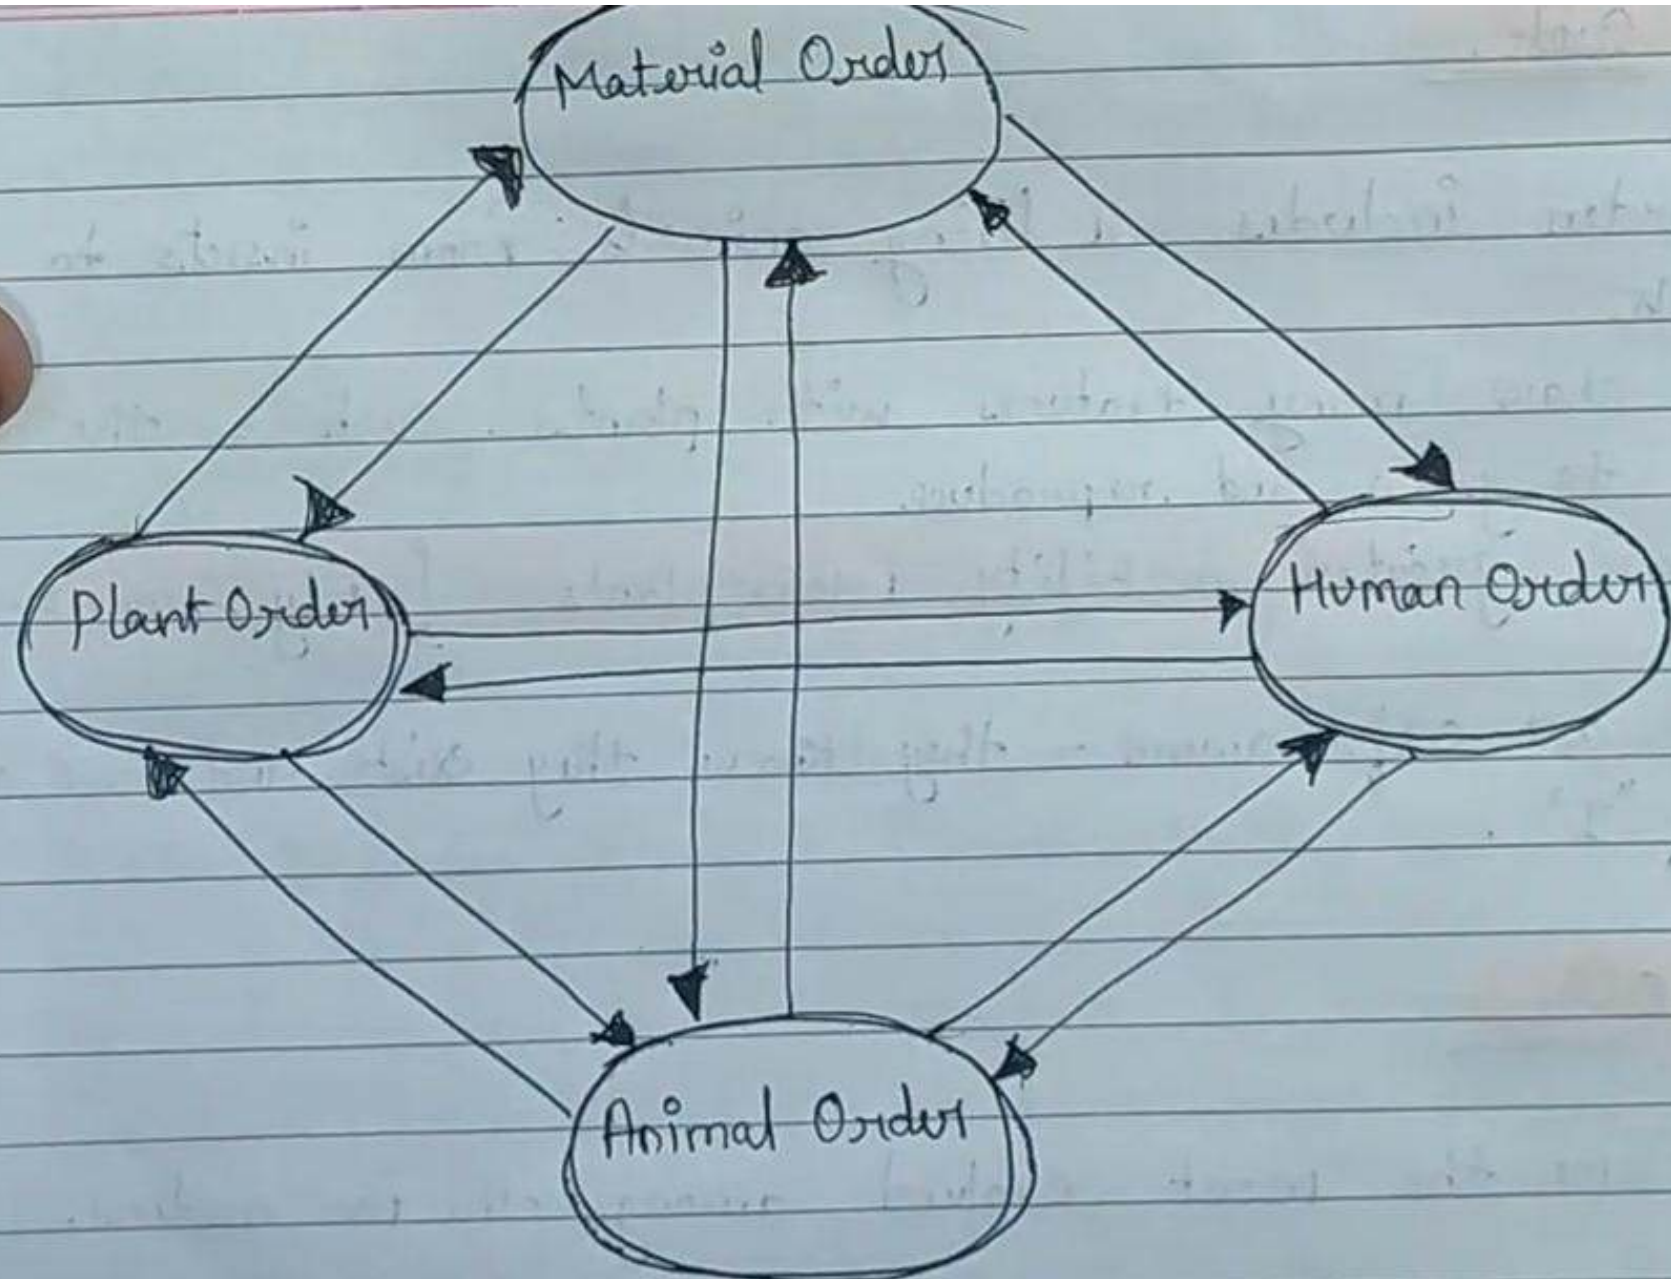
→ Like plants & animals, human can grow, reproduce and absorb nutrients

by Gulshan Tomar

→ Humans are independent, self-conscious and have unique abilities such as creativity, innovation & ethical decision making.

→ Humans greed & exploitation of resources disrupt harmony in nature.

by Gulshan Tomar



* Interconnectedness & Mutual Fulfillment

by Gulshan Tomar

How Do the Four Orders of Nature Support Each Other?

1. Material Order Supports Plant Order.

→ The material order (Soil, water, air, minerals) provides the basic foundation for the plant order.

→ Soil supplies nutrients, water provides hydration, & air supplies carbon dioxide for photosynthesis.

by Gulshan Tomar

2. Plant Order Supports Animal Order & Human Order

→ plants produce oxygen through photosynthesis, which animals need to breathe.

→ plants also provide food for animals.

3. Animal Order Supports Human Order & plants

→ Animals provide food (eggs, milk) and other resources (wool) for Humans.

→ They also help in pollination (bees), which supports plant growth.

by Gulshan Tomar

4. Human Order Supports All Orders

→ Humans have the responsibility to maintain balance in nature by protecting and nurturing all orders.

→ They can plant trees, conserve water and protect animals.

Mutual Fulfillment in Nature

→ Each order fulfills the needs of the others, creating a cycle of mutual support.

- Soil → plants → Animals → Humans → Soil.

by Gulshan Tomar

Q. "Other than the human order, the three orders are mutually fulfilling. Why does the human order fail?"

→ The Material, Plant & Animal Orders support each other naturally and work in harmony.

→ Humans, however, have the ability to think and choose, which makes them unique.

→ Unfortunately, due to greed, over consumption, pollution & deforestation, humans often disturb the natural balance instead of supporting it.

→ e.g → Overfishing harms the animal order and disrupts the food chain.

by Gulshan Tomar

How Can Humans Restore Balance.

① **Tree Plantation:** Restore the plant order.

② **Waste Management:** Recycle materials to support the material order.

③ **Animal Conservation:** Protect endangered species to maintain the animal order.

④ **Sustainable Living:** Use resources responsibly to ensure mutual fulfillment.

by Gulshan Tomar

What is Coexistence ?

→ Coexistence means everything in existence is interconnected and dependent on each other.

→ No entity exists alone; everything works together in harmony.

→ All units (material, plant, animal, and human) are part of a larger system and support each other.

e.g → Trees & Humans, & Rivers and life.

by Gulshan Tomar

Q. Express the term 'submurgence' with reference to coexistence in existence.

→ Submurgence means that every unit in nature is deeply interconnected and supports the survival of other units.

→ Nothing exists in isolation; everything contributes to a larger, harmonious system.

C.g → Trees provide oxygen for animals and humans, while animals and humans provide carbon dioxide for trees, creating a cycle of mutual support.

by Gulshan Tomar

Recyclability

* How Nature Regulates & Recycles Everything?

→ Nature has an inbuilt system to recycle and regulate resources.

① **Water Cycle** → water evaporates, forms clouds, rains & returns to rivers & oceans.

② **Carbon Cycle** → Plants absorb CO_2, animals release it through respiration, maintaining balance.

• Cyclical Processes in Nature

by Gulshan Tomar

Self-Regulation in Nature

- **Forests Maintain Balance** – Trees grow in proportion to available soil & nutrients, ensuring a stable ecosystem.

- **Animal populations are Naturally Balanced** → In every species the birth ratio of males and females ensures species continuity.

- **Human Impact on Natural Balance** – Unlike animals, humans disrupt nature through deforestation, pollution & gender imbalance due to societal practices.

Q. Explain recyclability and human interaction with nature. Mention two institute-level resolutions.

→

① Explain recyclability & regulation by nature.

② human interaction with nature

↳ Deforestation, Pollution, Over consumption of Resources.

③ Institute-level Resolutions.

i) Tree plantation Drive : planting trees to restore greenary & maintain ecological balance.

ii) Renewable Energy : Use solar, wind and hydro energy.

iii) Recycling waste : Reduce pollution by recycling waste materials.

by Gulshan Tomar

* What is Innateness & Inheritance?

- **Innateness (Swabhavikta)**: refers to the natural characteristic of a being or entity that remains unchanged. It defines the fundamental nature of something.

- **Inheritance (Anuvarata)**: refers to the qualities or properties passed down from one generation to another within the same order.

by Gulshan Tomar

Q. write the innateness and inheritance of all four orders. How is human conduct ensured?

Order	Innateness	Inheritance
Material	Existance (It exists, does-n't grow or reproduce)	physical properties (Density, weight, structure).
Plant	Growth (It grows & reproduce)	Reproduction (seeds)
Animal	Desire (Needs foods, shelter & survival)	Instinct - Driven Behavior (Hunting, migration)
Human	Seeking Truth & Harmony (Ability to think, understanding).	Ethical Conducts (Education, culture, values).

by Gulshan Tomar

Human Conduct is ensured through:

① Education → Teaching moral and ethical values.

② Family & Society → Providing role models and guidance.

③ Self-Awareness → Understanding responsibilities towards nature and society.

by Gulshan Tomar

→ Units

↳ A unit is something that is limited in size and bounded on all sides.

→ grass, planet, molecules.

→ Units are countable and recognizable.

Types of Units:

① Material Units

↳ Non-living things like atoms, soil, water and air.

② Conscious Units:

↳ living beings like human and animals.

by Gulshan Tomar

→ Space

- → Space is unlimited and has no size or boundaries.
- → It exists every where.
- → It is transparent.

e.g → The space b/w you and the book you are reading.

by Gulshan Tomar

Existence

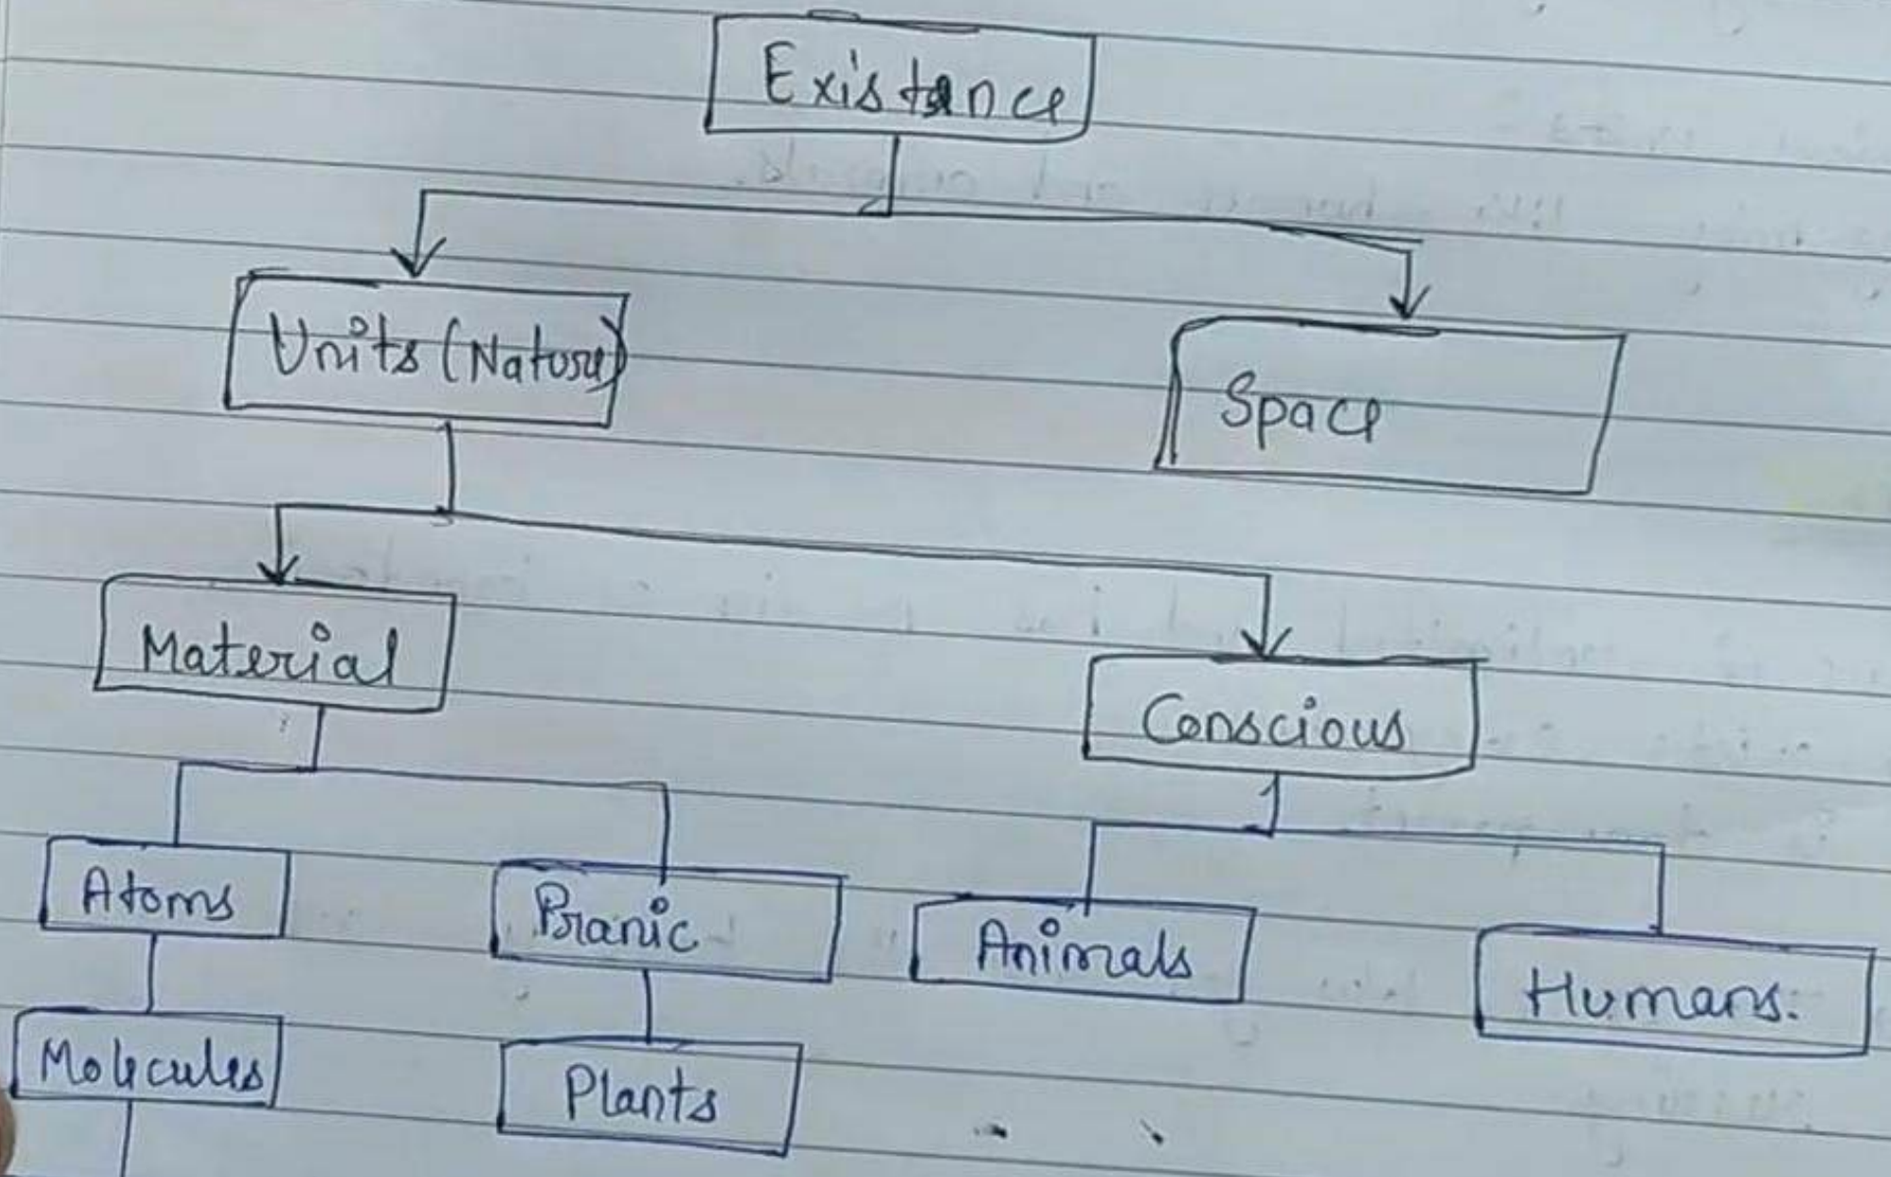
→ Everything in nature exists within an all-pervasive space, which provides room for all elements to interact.

→ Space is infinite, continuous and present everywhere.

e.g → Planets, stars and galaxies exist without colliding because of natural laws.

Existance = nature + Space

by Gulshan Tomar



Existence is Co-existence - No unit exists in isolation; everything is part of a larger System.

by Gulshan Tomar

Holistic perception of harmony at all levels of existence

→ Humans exist at four levels : Self, family, society and Nature.

→ Understanding these levels helps in making better choices and improving relationships.

→ Harmony at each level ensures inner peace, strong relationships, social unity and environmental balance.

→ Recognizing interconnectedness in nature helps humans live sustainably.

by Gulshan Tomar

Holistic Technology

→ Technology should support human well-being rather than profit-driven exploitation.

→ True development means coexisting with nature.

→ Holistic technology follows three principles:

- Fulfills real needs
- People friendly
- Eco-friendly.

→ Overuse of fossil fuels has caused environmental issues.

by Gulshan Tomar
